

BEFORE THE HOUSE AGRICULTURAL COMMITTEE in the STATE OF COLORADO

We, the undersigned citizens of the State of Colorado, are opposed to Senate Bill 10-052.

We oppose the striking of the words "and as future conditions require" from statute 37-90-106 which is contrary to the original intent of being able to relying on engineering data, well testing, and other scientific data that becomes available to adjust water pumping and that the chance for conservation measures to protect the ground water supplies will be diminished if we don't continually monitor and adjust for future conditions. The proponents claim that little or no designated ground water in the Northern High Plains designated basin is tributary to stream flows and that ground water pumping has little or no direct negative effect on stream flows contrary to proven water modeling as signed in the Republican River Compact Compliance agreement.

We believe that Senate Bill 10-052 will have a direct negative impact on Surface Water Right holders by imposing a "Takings" by the state with the passage of this bill. This bill will have an indirect negative impact to surface water users as they could very well lose their surface rights because of stream flow declines caused by ground water pumping. The proposed bill is an attempt to circumvent and even negate the ability for the first in time first in right water law to be used in the event of further declines in stream flows which diminishes the potential value of the property as well as creating undue cost and expense to the Land Owner to attempt to access their surface water rights.

We believe that the Bill is denying the Surface Water Users as Citizens of Colorado our Due Process.

By our signature we acknowledge that we have read and agree with the above Petition.
