1 *Be it enacted by the General Assembly of the State of Colorado:*

2 **SECTION 1. Legislative declaration.** (1) The general assembly  
3 hereby finds and declares that:

4 (a) Food allergies are a growing public health concern in the  
5 United States, especially among children;

6 (b) From 1997 to 2002, the incidence of reported food allergies  
7 among children less than eighteen years of age increased eighteen  
8 percent, and at least one study has shown that the incidence of peanut  
9 allergies among children less than eighteen years of age has doubled in  
10 this time;

11 (c) In a recent survey of four hundred elementary school nurses,

1 nearly half of them reported that the number of children with food  
2 allergies in their schools had increased during a recent five-year period;

3 (d) Recent studies indicate that hospitalizations resulting in food  
4 allergy diagnoses for children have increased, and from 2004 to 2006,  
5 there was an average of 9,537 hospital discharges in the United States  
6 each year that included a diagnosis of a food allergy for a child less than  
7 eighteen years of age;

8 (e) Allergies to milk, eggs, fish, shellfish, tree nuts, peanuts,  
9 wheat, and soy account for ninety percent of all allergic reactions to food;  
10 and

11 (f) There is no known cure for a food allergy, and strict avoidance  
12 of an offending food is the only known way to prevent an allergic  
13 reaction.

14 (2) The general assembly further finds and declares that:

15 (a) Anaphylaxis is a systemic allergic reaction that is rapid in  
16 onset and can kill a person within minutes;

17 (b) Food allergies are the leading cause of anaphylaxis outside of  
18 hospital settings, accounting for approximately one-third of all instances  
19 of anaphylaxis;

20 (c) Anaphylaxis attacks resulting from food allergies cause an  
21 estimated fifty thousand emergency room visits, two thousand  
22 hospitalizations, and between one hundred fifty and two hundred deaths  
23 in the United States each year; and

24 (d) Studies clearly show that many fatalities resulting from  
25 anaphylaxis are associated with a failure to administer epinephrine, a  
26 delay in the administration of epinephrine, or a failure to recognize the  
27 symptoms of anaphylaxis.

1 (3) The general assembly further finds and declares that the  
2 importance of managing life-threatening food allergies has been  
3 recognized by the American medical association; the American academy  
4 of pediatrics; the American academy of allergy, asthma, and immunology;  
5 the American college of allergy, asthma, and immunology; the national  
6 association of elementary school principals; the national school boards  
7 association; and the national association of school nurses.

8 (4) Now, therefore, the general assembly hereby declares that the  
9 state board of education and the department of public health and  
10 environment should develop a policy to manage the risks posed by food  
11 allergies and anaphylaxis in public schools.
