

Gun Control Research-Wright and Rossi Department of Justice Study
(Deterrent effect of armed citizens upon criminal behavior)

Professors James D. Wright and Peter Rossi of the Social and Demographic Research Institute at the University of Massachusetts conducted a study in 1982 and 1983 paid for by the U.S. Department of Justice. (Professor Rossi was a former President of the American Sociological Association.) The researchers interviewed 1,874 imprisoned felons in ten states.

Professors Wright and Rossi initially believed that strict gun control deterred crime. The results of their research led them to the conclusion that armed citizens have a beneficial effect in reducing criminal behavior and that harsh laws, such as handgun bans could result in criminals using sawed off rifles and shotguns with more deadly results. 88% of the criminals surveyed by Wright and Rossi agreed with the statement that, "A criminal who wants a handgun is going to get one."

A 1986 review of the professors' work, *Armed and Considered Dangerous*, by Raymond G. Kessler of the Department of Criminal Justice of Memphis State University, concluded, "Although *Armed and Considered Dangerous* is not free of methodological problems, it is the best policy-oriented study of criminals and their guns available."

Wright and Rossi reported that:

81% of interviewees agreed that a "smart criminal" will try to determine if a potential victim is armed.

74% indicated that burglars avoided occupied dwellings, because of fear of being shot.

57% said that most criminals feared armed citizens more than the police.

40% of the felons said that they had been deterred from committing a particular crime, because they believed that the potential victim was armed.

57% of the felons who had used guns themselves said that they had encountered potential victims who were armed.

34% of the criminal respondents said that they had been scared off, shot at, wounded, or captured by an armed citizen.

Based on this government-funded research by Wright and Rossi, it would appear that armed citizens do have a deterrent effect on crime.

Gun Control Research- Dr. Gary Kleck- Gun most effective way to resist robbery and assault- up to 2.5 million defensive gun uses per year by U.S. adults

Dr. Kleck, a professor of criminology at Florida State University is a registered Democrat, a member of the ACLU, does not own guns, and takes no money from anyone on either side in the debate. In 1988, Kleck published an article in the journal, *Social Relations*. This article, the first major research effort that measured defensive gun use, was based on state and national studies.

Dr. Kleck estimated that about 1 million adults per year use a gun for self-defense in the U.S. Kleck's research included studies done for the anti-gun National Alliance Against Violence, and the National Crime Victimization Surveys. Kleck concluded that gun use was the most effective and safest way of resisting a robbery or assault, safer than not resisting, running away, or using another method of resistance.

In 1991, Dr. Kleck published *Point Blank: guns and violence in America*. The book won an award in 1993 from the American Society of Criminology for an "outstanding contribution" to the field.

Not satisfied with the sources for his previous work, Dr. Kleck and his colleague Marc Gertz created a new survey with a sample size of about 5,000 individuals to better measure defensive gun use. With the new survey, Kleck and Gertz estimated between 2.2 to 2.5 million defensive gun uses per year in the U.S. Women were the defenders in about 46% of the cases reported. Less than 25% of the reporting defensive users indicated that they fired a shot during the incident under consideration.

Dr. Marvin Wolfgang was asked to critique the Kleck/Gertz Study. Dr. Wolfgang's review included the following: "I am as strong a gun-control advocate as can be found among... criminologists... they (Kleck and Gertz) have provided an almost clear-cut case of methodologically sound research in support of something I have theoretically opposed for years... the use of a gun in defense against a criminal perpetrator... I do not like their conclusions that having a gun can be useful, but I cannot fault their methodology."

The absolute lowest estimates of about 100,000 defensive gun uses per year in this country come from the Department of Justice, using U.S. Census information. There is no question in the survey that asks about defensive firearms' use. This estimate is probably a serious undercount.

The Clinton Justice Department funded what was supposed to be a counter study debunking the Kleck/Gertz research. In 1996, anti-gun researchers Ludwig and Cook came up with about 3 million defensive gun uses per year. They then decided that it is impossible to measure the true number of persons who use guns in America for self-defense.

The research done by Kleck and Gertz indicates that defensive use of firearms by private citizens is a significant factor in stopping criminal violence. The research also lends itself to the conclusion that in the vast majority of cases where a gun is used to resist robbery or assault, no shots are fired.
