Summary of Legislation

The bill allows a person who has reached 16 years of age, but who will not be 18 years of age by the date of the next election, to preregister to vote. Preregistered voters are then automatically registered upon turning 18 years of age. A person may preregister and make subsequent changes to his or her registration information on the Secretary of State's website.

State Expenditures

The bill is expected to increase costs on a one-time basis in the Department of Revenue (DOR) by \$71,672, and is expected to increase costs in the Department of State (SOS) by a minimal amount. These impacts are discussed below.

Department of Revenue and Governor's Office of Information Technology (OIT). The DOR requires one-time programming costs totaling \$71,672 to comply with the bill's provisions. Of this amount, \$31,672 is for reappropriation to the Governor's Office of Information Technology (OIT), and \$40,000 is required for contract programming services. The OIT is required to update licensing and voting modules in the Driver's License System in use throughout the state. The voting module permits the Secretary of State to periodically extract data for purposes of keeping its roll of registered voters up to date.

The DOR uses a computer-generated form known as the declaration sheet to confirm information submitted by an applicant for a driver's license, provisional license, or state identification card. The reverse side of the declaration form is the Application for Voter Registration Form, which will require changes in order to comply with the bill. Necessary modification will cost \$40,000 in contract programming services. Verification of information required as part of the voter registration process will increase driver's license examination facilities' workload; however these increases will be absorbed within existing appropriations.

Secretary of State. The SOS will modify SCORE, the statewide voter registration system to implement the bill. These modifications will occur in conjunction with other scheduled changes and, as a result, will not result in an expenditure increase. Voter registration forms will need to be updated; however, unlike changes that require the form to be updated before an election, e.g., modification to the list of acceptable forms of identification required for voting, this change will be done in stages. As a result, the specific update required by the bill will be accomplished within existing appropriations.

Local Government Impact

The bill will increase workload and costs for county clerks to preregister persons below the age of 18 who are not allowed to register under current law. These costs include staff time to process requests, printing and postage to send notification that a preregistration was accepted, and a likely increase in the number of address changes to be processed. The number of preregistrations or updates to registration through online voter registration from preregistrants that will be submitted is not known at this time, and specific costs to counties have not been estimated.

In addition, county clerks are required to finalize the registration of preregistered voters when they turn 18. The fiscal note assumes that the modifications to SCORE by the Department of State will allow county clerks to be automatically notified or to generate reports about preregistrations that require final action when voters turn 18 years old. Therefore, the costs to process and send out the final voter registration to preregistered voters is not expected to be significantly different than the current costs to process voter registrations for 18 year olds that register under current law.

State Appropriations

The Department of Revenue requires a total appropriations of \$71,672 in FY 2013-14 from the Licensing Services Cash Fund. Of the total, the Governor's Office of Information Technology is to receive \$31,672 as reappropriated funds.
